

| Company | Webpage | Sector | Field of activity |
|---|--|---------------------------------------|---|
| Agricolae Ltd. | www.agricolae.hu | agricultural and food industry | History of the company group Agricolae Ltd. The company group Agricolae Ltd. was founded in 1998. The purpose of the foundation was to promote the exportation of fruits and vegetables, such as walnut of the region Eszár and its surroundings in the possibly shortest way. Currently it is a family enterprise dealing with wholesale trade of fruits and vegetables. Further aim of the company is to coordinate and organize the activity of fruit and vegetable producers in the Eszár region and its surroundings, in order to ensure the best possible marketing of their products. The fruits we buy and produce include: gooseberry, sweet cherry, sour cherry, plum and apple. The mentioned fruits are sold both domestically and in foreign markets as raw or preserved food. In order to improve the competitiveness of our company and the quality of our products we constantly make efforts to renew and modernise our factory. The company group Agricolae Ltd. has set up an objective to cover consumer's demand at the highest level and to distribute healthy and tasty fruits at a reasonable price, thus to become a modern, European enterprise in the 21st century. Hungary's cooperative Mogyi Kert-ÉRT was founded in 2003. Today it is the cooperative with the highest number of members in Hungary. The cooperative coordinates the work and developments among the producers like an umbrella organization and it promotes the marketing of the fruits produced by its members. The company Eszár Bio Ltd. joined the organization in 2009, and then in 2009 the enterprise Eszár Bio Szőlészeti és Szőlészeti Kft. has been also associated with the company, which nowadays employs about 100 employees. The company's variety of the processed and preserved products offers now the retail size packed jams of the trademark "Eszár Bio". The taste of Eszár Bio products, that was continuously introduced to the consumers' market in 2014. This regional flavour, as well as the traditional appearance of the product has become acknowledged soon by both our sales partners and - which is the most important - the consumers as well. We do our best to introduce this traditional Hungarian, group of healthy fruit products in both Hungarian and foreign markets, that are trademarked as 'Hungarian Product' and 'National Product' since August 2014. Our company in numbers In the production year 2012 - that can be characterized as a record year - our company processed 7000 tons of industrial and table apple. This amount was partly re-sold. The amount of processed apple was 4000 tons last year. 3000 tons of sour cherry was processed in 2012. Altogether 1 million 750 ml sized jars and 250 thousand 'Vasúti' sized (4250 ml) jars of compote were produced from this amount. In the season of 2013 this number was increased to 4000 tons. Thus our production was increased to 1.5 million jars of 750 ml and 200 000 jars of 4250 ml compote. In spite of the deviations in the produced amount of plum our company group processed 2500 tons of plum in 2012. The most of that, 500 tons were processed as plum jam. Last year we have processed 3000 tons of plum and produced 650 tons of plum jam. The daily capacity of our facility enables the processing of 60 tons of plum from that 15 tons of plum jam can be produced. |

We are looking for partners mainly from light industry (leather, fur, microfiber, leather) and from adhesive and foam (PE, EVA) industries. |
| GalvanPlastik Ltd. | www.galvanplastik.hu | machinery industry | Establish of the company: This privately owned company was established in 1980. Operating in the field of injection moulding since 1992 and surface treatment, especially that of chrome-plating since 2004. In 1980, GalvanPlastik was the first Hungarian company specialising in assembling. We own 4,300 m2 plant areas. The number of employees is 121. We are ISO 9001, ISO 14001 (since 2006) and ISO/TS 16949 certified (since 2009). Applied technologies: Moulding part: Injection technology: one and 2 components. Range of our moulding machines: clamping force from 30 to 900 tonnes. Electroplast part: Three-layer electrodeposition. Plastics: Plastics of our moulding machines: Application area of our electroplated parts: Automotive part - sanitary -, and electronic industry. The types of plastics that can be coated at our plant: ABS and ABS/PO blends (PC content up to 60 wt %) and polycarbonate (PC content up to 100 wt %). Surface treatment: Galvanizing: matt Nickel, MPS Nickel, different coats of chromium, or by customer requirements We produce for the following car brands: BMW, Mercedes Benz, Opel, Volvo, Toyota, Citroen, Suzuki, Fiat, and Volkswagen. Our main customers: Electronics, Rhinow, ARN, Plasmas, Samsung, Gira, Canadac, Plastika, Painsa |
| GYOF Kármesta Ltd. | www.gyof.hu | Machinery industry | Our company stainless steel, acid-proof steels, manufactures unique devices, construction of proper technological systems, trades semi-finished and finished products. Most of our products are made for industrial use, but we also satisfy residential needs. Construction of proper technological systems. Food and Beverage Industry, Chemical Industry, Waterworks, Pharmacy industry. |
| Hantech Ltd. | www.hantech.hu | Machinery industry | Traditionally Hantech Zrt. Ltd. is a company for the manufacturing of agricultural machines and equipment for the agricultural business since 1949. We are located in Western-Hungary in the city of Csorna, where the company was initially founded, near the Austrian-Hungarian and Slovak-Hungarian border. The main product of our company is the Pick-Up adapter integrated into harrow. Hantech also produces spare parts for the automobile industry. For many years we have been years in the automotive industry. Hantech Hungary is a member of the Hantech Group, which produces the shaft ends and various laser-cut parts for chassis. |
| Lakics Ltd. | www.lakics.eu | Machinery industry | With over 30 years of experience in the renewable energy sector, Lakics has introduced 30 kW and 50 kW wind turbine generators to the market. 30 kW and 50 kW wind generators can supply energy to farms, agricultural and agricultural product processing facilities or to household blocks where energy networks are limited. The generators are characterised by state of the art technology, reliable, fail-safe operation, long product lifetime, low maintenance costs and high return on investment. |
| Pata József Gépipari Ltd. | www.patakj.hu | Machinery industry | Our family business company produces precision mechanical parts. Our company was born in the garage of our family house, in the village of Fajsz in 1988. In 1992, we became the first TIEB suppliers of Suzuki's new factory in Esztergom. As the quantity of our orders and the quality requirements increased, we had to come to a complete renewal in 2001. We have saved found a greenfield investment of a two-story building with a 1,400 m2 plot, a large hall, a paint shop, a grinding shop, a welding shop, a grinding shop, 3,300 sqm. We are working with 100 employees on 58 pcs high quality press machines, 18 pcs welding machines and 4 welding robots. The first and second generation of family continued the operation as a business and workshop. |
| Pinter Works | www.pinterworks.com | Machinery industry | Our Company, in addition to the traditional networking machinery and equipment, has some special devices, which makes it possible to produce, to renovate and to machine special items in terms of weight and size. The technological, planning and developing processes practically cover everything that is related to metalworking from the small bolts to the huge items of several tons - steel structures and frames - turbines, locks and other subunits of heat and power plants. We are also producing special parts for special devices for nuclear power plants - nuclear waste storage units - high capacity pressure vessels and liquid storage tanks - parts for bridges and transportation towers - heat exchangers, pipe systems and boilers - industrial pipelines - special waste containers - precision products |
| Selliform Ltd. | www.selliform.hu | Machinery industry | Marketresearcher and consultant company offering a broad spectrum of know-how in the field of procurement, logistics and development. |
| SFI Engineering Hungary Ltd. | www.sfiengineering.hu | Machinery industry | The SFI engineering Hungary Ltd. installs automated technology for industrial partners. Our portfolio is engineering of machines, automation of production lines, Industry 4.0 and energy optimization. The solutions are focused on the customer real needs. We are regularly validating the efficiency of the development. Our experts are determined to fully support our clients from the beginning until the product release while actively quantifying the production high qualified line is actually comparable to the operations based on highest technological competencies. |
